Subject: Revised Removal Field Sampling Plan

Chip, Mavis,
Attached is the revised Memorandum No 37. Field Sampling Instructions, RMC-Troutdale Post-Demolition Removal Sampling. This plan has been revised per our discussions during our meeting of September 29 2005 and follow up discussions with EPA's oversight contractor John Howland with Parametrix.
We are providing the plan in an electronic version only at this time, because our consultant, CH2M-HILL, is moving offices and experiencing temporary reduced production capabilities. Once we receive your final comments we will incorporate those changes and issue a final hard copy document.
